

Long term data (1978-2014) for the River Crane at Northcote Road, Isleworth.

It shows Soluble Reactive Phosphorus concentration [SRP] (mg/l) mean values for each individual year with the standard deviation. Years 1978-1984 have only few samples taken in a year and would not be included in an official WFD classification for individual year (at least 8 samples are required), however has been included here for completion. The colours indicate WFD phosphate standards for the River Crane at Northcote Road and are in a table below.

## UNCLASSIFIED

SITE ID	SITE NAME	ALTITUDE (m)	ALKALINITY (mg/l CaCO <sub>3</sub> at pH 4.5)	HIGH (mg/l)	GOOD (mg/l)	MODERATE (mg/l)	POOR (mg/l)
PCRR0006	Crane at Northcote Road, Isleworth	6	188	0.049	0.089	0.212	1.091

The 2014 mean value 0.26 is very close to the moderate class and it will be interesting to see if 2015 will show first moderate class for the individual year.
